

CUSTOM ENGINEERED SYSTEMS

Fluidpower

Custom Skids and Injection Systems

POWER OUTAGES DON'T AFFECT THE HAMMONDS SYSTEMS!

Flow of fuel is the only power source needed.

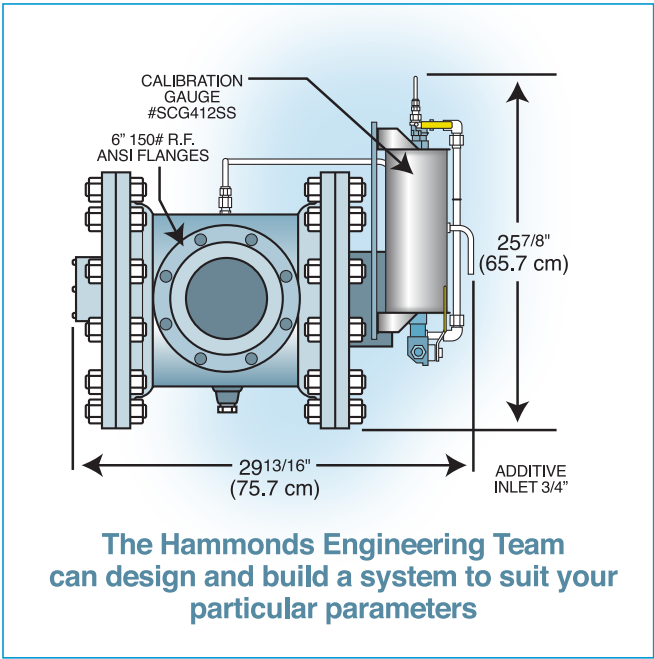

What about a self-contained skid with custom accessories? Hammonds can provide you with **a skid that will handle whatever requirements you need** to get the job done. Talk to us about your specific requirements and our engineers can help you assemble a skid that will meet all of your job requirements. From our **smallest Model 150 to the largest Model 2400**, we can integrate the options and accessories you need to make your fueling system truly unique.

- Fixed or mobile skid installations
- DOT compliant trailers
- Weather enclosure panels
- Stainless steel additive tanks
- Hose reels
- Pressure control valves
- Product meter and additives meter integration
- Data communication provisions to your specification
- Custom epoxy paint, CARC and Powdercoating to your specification

Hammonds has the capability to design and build the system you need

The **flow of fuel provides all the power needed** to run fluid power units and **no outside power source** is necessary. The custom-engineered systems are available in several sizes to fit custom applications. The unique positive displacement fluid motor allows coverage of a broad flow range while allowing **up to (4) additives to be injected at different PPMs** simultaneously. Custom fabricated in carbon steel, with 150# or 300# ANSI certified connections of your choice, **these systems are built to fit unique applications** where no meter and/or power is available.

- In house CNC machining—up to 5 axis
- In house plate steel, stainless steel and aluminum processing
 - Laser cutting to 1/2"
 - Waterjet cutting
 - Hy-def Plasma cutting
- CNC press brake
- Full service fabrication and welding

Over **11,000** Systems Installed—WORLDWIDE
