

ADDITIVE INJECTION SYSTEMS for...

OCEAN SHIPS

PASSENGER, FREIGHTER, CONTAINER

The high seas are no place for contaminated or poor quality fuel. Hammonds injectors eliminate the problem of microbial growth in diesel fuel and provide a sterile and trouble-free fuel for those long voyages.

Model 600

Our most popular unit offers single or multiple additive injection at flow rates of 20 to 250 gallons per minute. The Model 600 can inject up to four additives at different injection ratios simultaneously.

Model 800

Simply a larger version of Hammonds Model 600. Can inject up to four additives simultaneously at different injection ratios. As with all Hammonds injectors the additives are injected in proportion to the flow of fuel resulting in an even and accurate blend of fuel and additive.

Model 600
